

HOLTOP

Filtration Ventilation System

Bring Forest Fresh Air to Your Life !

CE

Indoor air quality
is seriously affected
by outdoor air
pollution

Indoor air pollution hazards

Catching colds

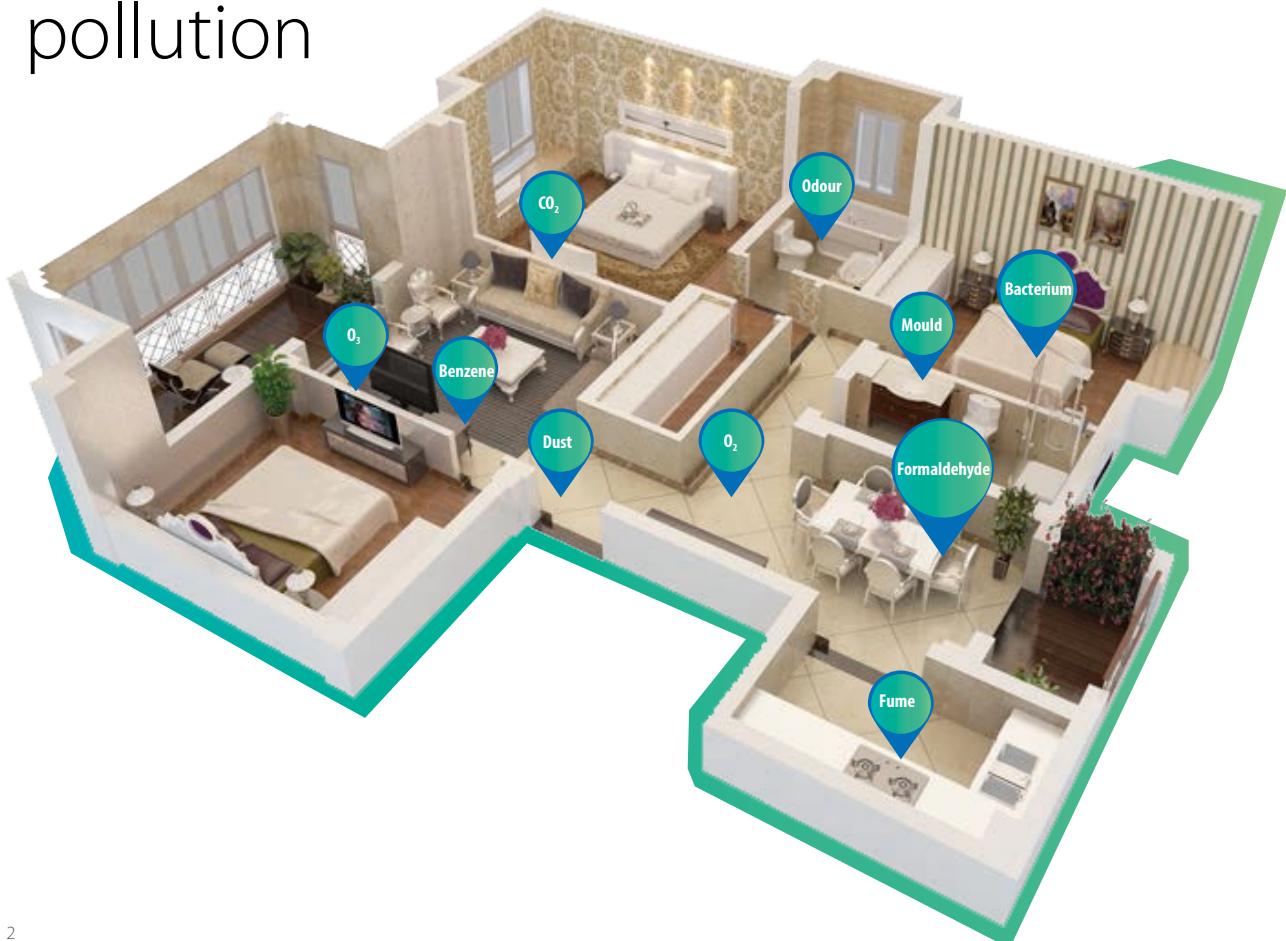

Dizzy, nausea

Fetal deformity

Immunity decline

Allergies

Bad smell

Excellent Indoor Air Quality, High Oxygen Content

Multi-stage gradual filters
to remove dust, PM2.5,
bacteria and harmful
substances

Providing fresh air all the
time to make you feel
breathing in the nature.

Smart controller available
to work with ERV or
independently to monitor
indoor air quality

Easy installation and
maintenance, 20% less
thickness

Sub HEPA F9 filter

- Double high efficient filters;
- Operating theatre clean class material;
- Filtration class is up to F9, passing national GB/T 14295 standards.

Filtration effectiveness **95%**

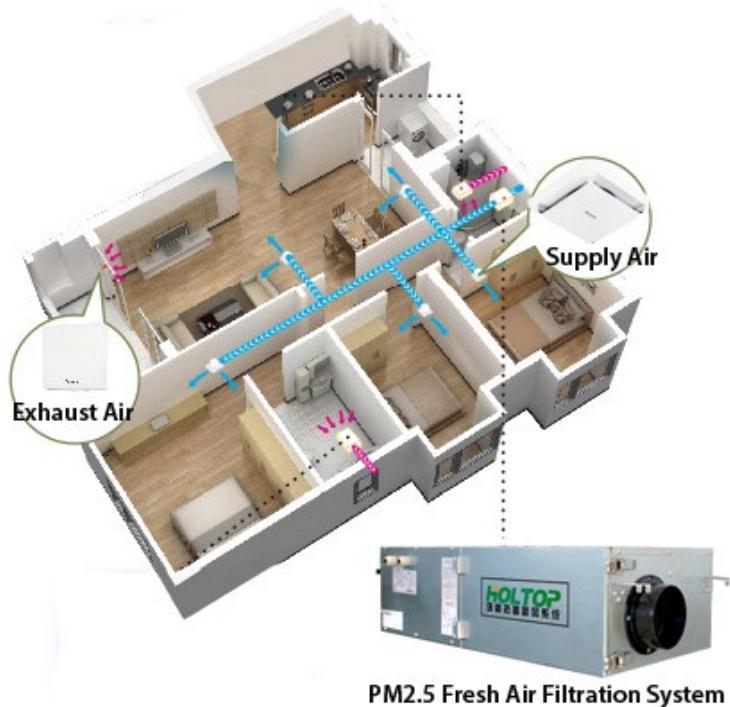

The single-way fresh air filtration system supplies outdoor fresh air to room with high purification. It's equipped with double filters with PM2.5 filtration rate over 95%. It can be used to work together with Holtop energy recovery ventilator for better air purification either used independently for air purification in air conditioning system.

It has the optional functions of indoor circulation. In the situation when it's not suitable to introduce outdoor fresh air, it can bypass the air in the room for indoor air purification only.

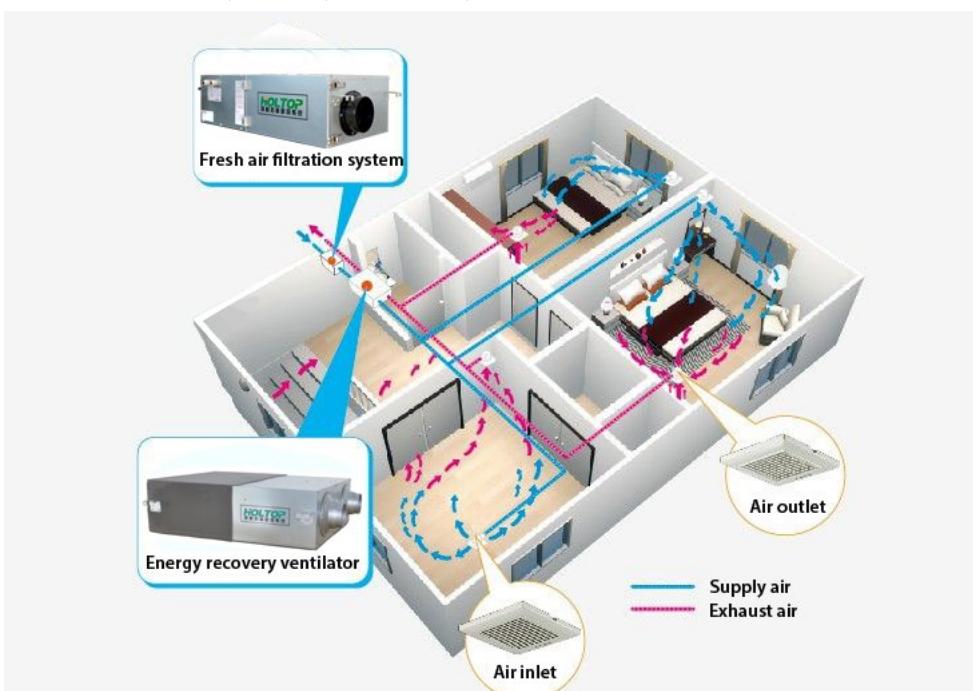

One product can solve all your air quality problem: fresh air, air purification and cleanliness with much lower costs.

Installations

Single-way Fresh Air Filtration System Installation

Single-way Fresh Air Filtration + Energy Recovery Ventilation System Installation

Fresh Air Filtration System

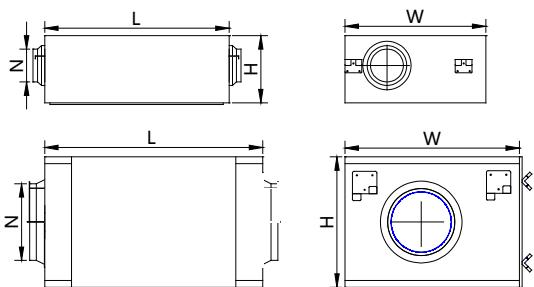

FEATURES

- Double filters, PM2.5 filtration over 95%
- Zinc free galvanized steel plate, high Corrosion resistance and long service life
- Built-in low-noise blower
- 3 speed high efficiency motor, running smoothly with low noise
- Super thin design and fit for installation

Fresh Air Filtration System

FEATURES

- Double or triple filters, progressive filtration class to increase effectiveness.
- Double filters: plate type coarse filter and bag type medium filter, the ultimate efficiency rating at F5.
- Triple filters: based on the two grades of filtration class, adding HEPA filter, the ultimate efficiency rating at H10.
- Built-in low-noise blower
- Can work separately or connected to HRV and air conditioner
- Easy to install and maintain

Note: KJ/KJD/KJGD series is suspended type, and KJL/KJGL series is floor type.

Fresh Air Filtration System with Internal Circulation System

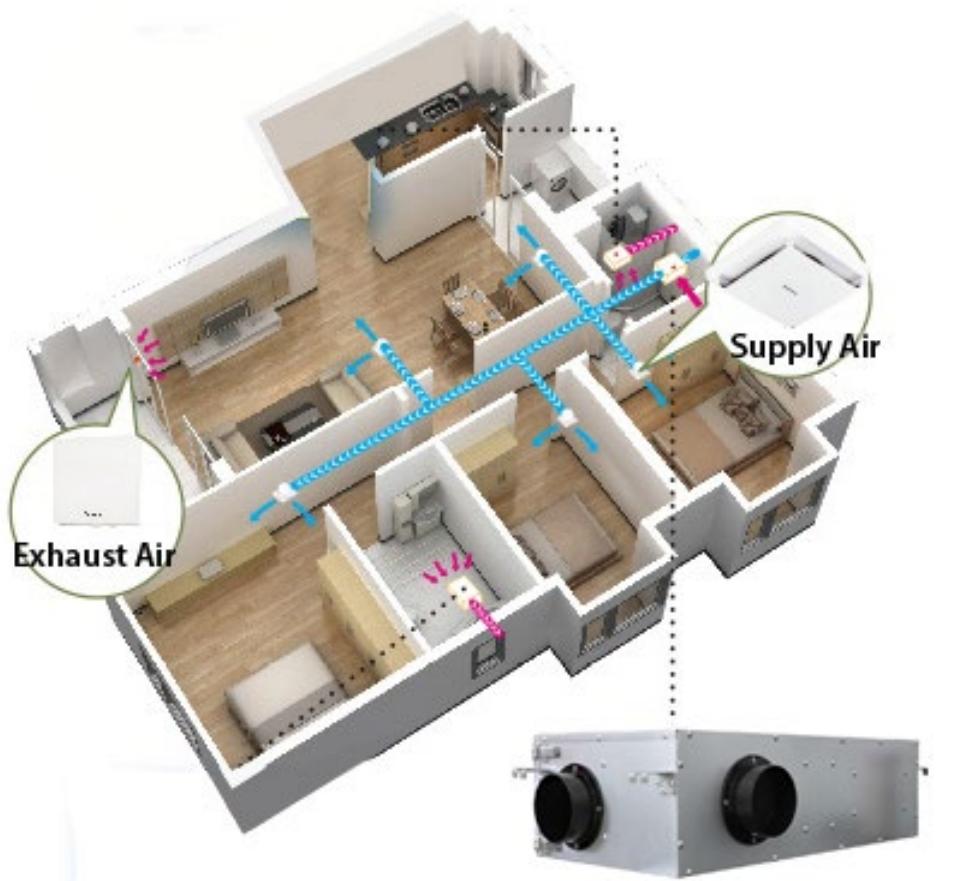

FEATURES

- PM2.5 High efficiency filter
- By-pass functions for indoor air purification
- Built-in low-noise blower
- 4P Asynchronous motor
- Easy to maintain
- Ultra thin design and fit for installation

INSTALLATIONS

Ventilation for apartments

PM2.5 Fresh Air Filtration System

VENTILATION FOR ATTIC

All in one design

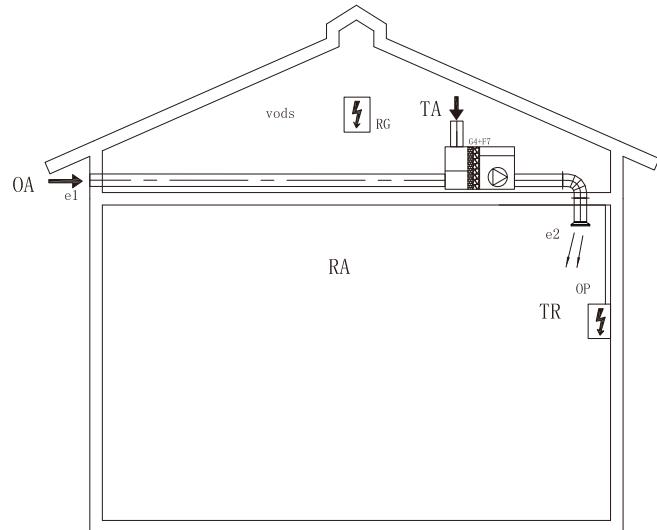

No need to install centrifugal fan, filtration box and motorized diverting branch with ducts separately, saving labor costs and installation materials and less construction garbages.

Recycles Lost Heat

Warm air rising into the roof from home heating is recovered and recycled back into the house, resulting in much reduced heating costs.

Anti Condensation

The ventilator forces out the stale moist air that causes problem condensation and damp conditions, replacing it with clean dry air

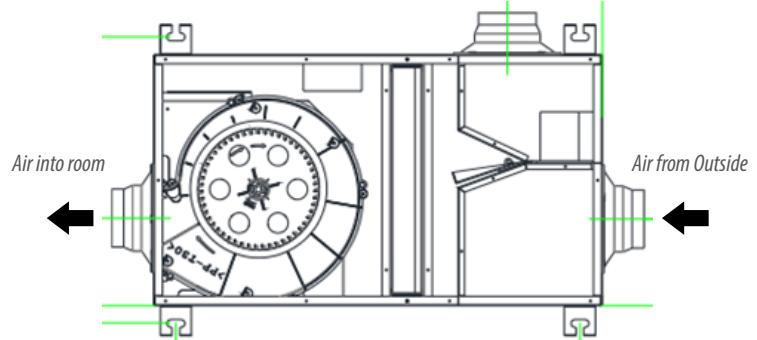

Solar Heat Saving

Roof and ceiling spaces are excellent passive collector of solar energy. This warm dry air is supplied back into the house as the ventilator forces the warmed air into the cooler living spaces.

Air purified

The outdoor air will be purified before supplied to room for healthy life. Integrated with F9 filter to stop outside air pollutions like PM2.5 into house. Higher air cleanliness and cleaner house, save time and money to clean the house.

INTELLIGENT CONTROL FUNCTIONS

Heating/Cooling/Auto mode

Under heating mode, ventilator will bring fresh air from OA or TA whoever with higher temperature.

Under cooling mode, ventilator will bring fresh air from OA or TA whoever with lower temperature.

Under auto mode, ventilator will compare indoor temperature (RA) and setting temperature (TR), if TR>RA, runs heating mode, if TR<RA, runs cooling mode.

Fan speed can run manually or automatically under each mode.

FEATURES

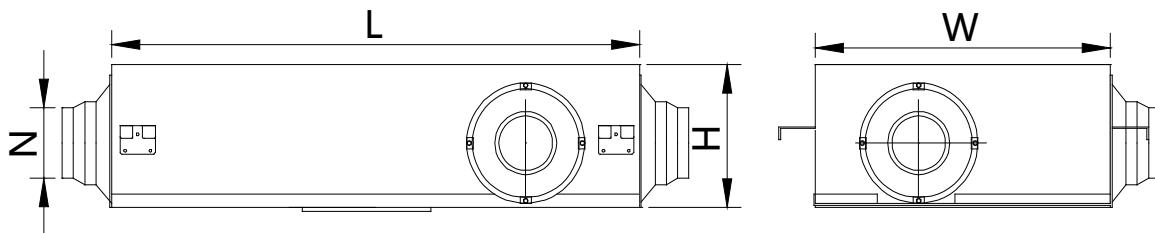

- PM2.5 High efficiency filter
- By-pass functions for indoor air purification
- Built-in low-noise blower
- 4P Asynchronous motor
- Easy to maintain
- Ultra thin design and fit for installation
